**Alphabet Soup**

*This cooking class will be a delicious learning experience for all children. They will build math and literacy skills, practice science process skills, and explore different food groups. This class will be a hands-on learning experience as they transform fresh, simple ingredients into tasty treats and have fun learning.*

**Let's Pretend**

*Engage your child's imagination and encourage them to think creatively in our Let's Pretend enrichment class. In our class, children explore literature through books and stories, and have fun retelling stories with simple, and creative dramatics. Pretending and story retelling improves children's vocabulary and literacy skills and promotes social cooperation and group interaction. Your child will thrive in this environment that promotes self expression, hands on experiences, and much opportunity for learning through play.*

**Power of Play**

*The children will enhance their cognitive, language and social skills through play. Just as an artist creates a vision on a canvas, a child does the same through their imagination. Our Power of Play enrichment program will contribute to all areas of their development.*

**Book Nook**

*Enhance your child's literacy experiences with our new Book Nook enrichment program. Children will have the opportunity to curl up with their favorite book that has been part of the Power of Play classes here at CPNS. This enrichment class will foster knowledge about print and the use of literacy. It will promote vocabulary and motivate children to read as well as foster emergent reading and writing skills that build the confidence that children need to be successful readers and writers.*

**Math Wizards**

*1, 2, 3.....Let's Count! This class will provide meaningful every day Math activities. The children will be learning Math through play and developmentally age-appropriate activities. Join us to see how fun Math can be.*

**Full S.T.E.A.M. Ahead**

*The children will explore mathematical and scientific concepts related to the world around them as they develop important skills such as reasoning, problem solving and communication, through hands-on activities and lessons. They will participate in science discovery and learn math concepts through games and play.*

**Sing, Dance & Play**

*Children will discover how rewarding the world of music making can be through songs, dancing and playing musical instruments. Participation through multi-sensory musical experiences can have a long lasting impact on a child's self-confidence, self-expression and self-discipline. Exploration of musical instruments, listening to different genres of music making musical connections through literacy will also be included in this enrichment.*
